

SUSTAINABILITY POSITION

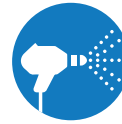

At **TableLogix** we do everything possible to manufacture with our environment in mind and be conscientious of our decisions and how it effects the environment.

We consider in mind with all products and materials wood, metal, foam etc. how it impacts energy efficiency, waste, water conservation, all are factors we prioritize in our manufacturing of products.

We limit the amount of toxic chemicals used in our manufacturing and 98% of our wood used in fabrication of our products are from certified forest and backed by the FSC (Forward Stewardship Council).

We recover as much powder coat paint as possible, this is achieved with our reprocessing equipment used in the paint cell.

We only use recyclable or bio-degradable materials, paper, cardboard, plastic etc. for our packaging materials.

All of our excess steel goes to local steel shop for recycled use.

All of our excess wood material is ground up into dust and used for turkey bedding at turkey farms.

TableLogix continues to work to refine our manufacturing processes and are devoted to our customers and planet.
